

All-in-One Wireless Network Solution

The Smart Choice for Underground Comms

- Equipment is 100% recoverable
- The clearest voice for maximum productivity and safety
- Mesh nodes act as repeaters and communicate wirelessly, minimizing cabling
- 900 MHz operation enables long spacing between nodes – much longer than 2.4GHz systems
- Communications at working face – wirelessly
- Real-time tracking of people and vehicles using the same network and handsets – no separate tracking device required
- Atmospheric or other sensors can be connected wirelessly to the same network

Permanent or temporary wireless communications to support long or short-term deployments
